

Student Healthcare ...The Way It Should Be

The mission of Student Health Services in colleges and universities is the advancement of student health and the creation of healthy campus communities. Providers of student health services strive to effectively manage health conditions and chronic diseases, reduce the risk of individual illness and injury, assist students in embracing healthy lifestyle choices, and improve healthcare efficiency.

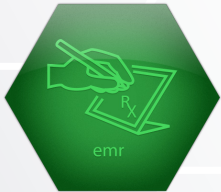

The use of electronic health records (EHR) in the college/university healthcare setting drives the quality of care when treating students and student athletes. The EHR provides a single longitudinal record for every student and can generate the analytics needed to conduct population-based assessments of health status and health needs of students. This information is essential in order to develop measurable goals and objectives for health promotion initiatives and evidence-based treatments of common and chronic conditions and injuries.

In addition to being an ONC-ATCB certified*, award-winning EHR/PM solution, eClinicalWorks provides a host of innovative tools – Student Portal, P2POpen™, eClinicalMobile®, analytics, interoperability and more.

eClinicalWorks

Finally, an Electronic Health Record system designed with your students' and athletes' health in mind

eClinicalWorks' (eCW) comprehensive EHR is the next-generation healthcare IT solution, allowing student health organizations to improve efficiency and enhance patient care. Using modern, web-based technology, eClinicalWorks helps you achieve your goal of delivering the best care possible to your students. Included in the EHR are the following:

Electronic Medical Record:

eClinicalWorks is a state-of-the-art electronic medical record that is easy to implement and easy to use. The EMR gives providers multiple data entry options for accurate, thorough and fast clinical documentation. Diagnosis

and treatment codes, patient education, and tools for communicating with colleagues and students are all just a click away.

Practice Management:

Capture a comprehensive patient registration using the eClinicalWorks application or interface to your college or university's registrar system. Student-related fields such as housing and term information come standard with the

product. Walk-in and emergency appointment slots are easily managed in the flexible Resource Scheduler and the check-out process is a breeze.

Student Portal:

The web-based Student Portal features a user-friendly interface for both patients and providers while providing extensive functionality. The Student Portal allows your students to communicate privately and securely from the comfort of their

dorm, making healthcare accessible to even the busiest of students. Students can schedule appointments, view their Personal Health Record, view lab/imaging results, request prescription refills and obtain advice from your professional health services staff members in confidence.

The Student Health and Athletic Health Record Provides:

- **QUALITY:** eCW expands standardized clinical pathways to support best practices patient care and safety
- **ACCESSIBILITY:** eCW is accessible to students and providers anywhere there is Internet access – the Student Portal provides secure access to services from the privacy of their dorm, and providers can access eCW in the office, on the field, or from home
- **STUDENT-CENTERED:** eCW makes it possible to deliver appropriate care in the proper setting in a timely manner with a longitudinal student health record at the provider's fingertips

Mobile Solutions:

eClinicalWorks offers two options for mobile access to the EMR:

eClinicalMobile allows authorized providers to access student health information from any Smart Phone that has full Web browser capabilities. Providers can securely access schedules, write prescriptions, send messages, view the Patient Hub, and access encounters. Patient Care – Anytime, Anywhere...that's eClinicalMobile.

eClinicalTouch® leverages iPad™ technology to deliver the comprehensive EHR with the look, feel, and functionality of eClinicalWorks. Users get the ease of use and portability found in a native iPad environment, whether interacting with students in the health center, on the athletic field, or remotely.

Messaging:

Is there a student who does not have a smart phone?

eClinicalMessenger®, a voice messaging system that utilizes Voice-Over-Internet Protocol (VOIP), enables the practice to send automated messages – in batch or individually to students in a variety of formats (email, text message, voice message). Let eClinicalMessenger handle the appointment reminder calls while you focus on your students.

Interoperability:

The key to a healthy student population is the ability to deliver coordinated care. Using eClinicalWorks' interoperability platform, your organization can stay connected with the primary care

provider (PCP) and/or specialists that treat your students when they are not on campus. This platform provides a longitudinal view of your students' medical records, which can prevent the need to order redundant tests and keep each of your student's PCP informed of their health.

The Technology:

- eCW has been designed as a Web-based architecture, promoting true community connectivity and portability of patient records
- eCW is a single database solution with a unified approach to the clinical and administrative aspects of healthcare – eCW seamlessly connects all aspects of the patient record for easy access
- eCW N-tier architecture is scalable vertically and horizontally for all sizes and specialties of practices, groups, and enterprises
- Built-in failover capability for high availability systems provides eCW customers the reliability needed when dealing with protected health information
- Application hosting is provided by eCW on the eClinicalWorks Private Cloud, giving secure, reliable access to patient records on demand, anytime, anywhere

Enhanced Functionality for the Athletic Department

eClinicalWorks continues to be a market leader in the ambulatory EMR market space, providing the best in healthcare technology to college and university health services. In keeping with our history of continuous product innovation, we have enhanced the core product functionality to include features that are specifically designed for Athletic Trainers and Physical Therapists who are called upon to develop injury prevention programs and treat injuries that occur on the field. All of the standard EMR features, as well as the sports medicine features, are available on both the iPad™ and Desktop/Tablet PCs, providing robust functionality with a holistic view of every student athlete.

An intuitive user interface promotes ease-of-use under the most challenging of situations. A complete and accurate clinical note can be created in minutes and is available anytime, anywhere.

Product enhancements found in the module include the ability to:

- Define each team's roster with fast and accurate player search
- Define and capture data related to a new or existing injury
- Concussion tracking
- Easily create a rehab program and enter in daily treatment modalities
- View images and X-rays directly from within the EMR in real-time
- Produce coach's and other operational reports

“The National Football League (NFL) and its healthcare professionals pride themselves in maintaining a leadership role in sports medicine developments. We are always looking for innovative ways to enhance healthcare within the organization. Electronic Health Records are the next logical step and we look forward to partnering with eClinicalWorks on this initiative. The NFL is moving from paper medical records to electronic and will use eClinicalWorks' comprehensive electronic health records (EHR) solution. The NFL is implementing the eClinicalWorks EHR solution across the organization to streamline processes between locations and coordinate care.”

Dr. Tony Yates
President of the NFL Physician Society

The following Universities are using eClinicalWorks to improve healthcare on campus

Northeastern University (NU) Boston, MA

Northeastern University's University Health & Counseling Services was an early adopter of technology, purchasing eClinicalWorks in 2006 and uses the eClinicalWorks suite of products to provide student-centric care to 20,000+ full-time under graduate and graduate students. NU works with many of Boston's top hospitals including Beth Israel Deaconess Medical Center. NU's University Health & Counseling Services provides urgent, routine, and preventive care for physical and emotional issues.

Indiana University Bloomington and Indianapolis, IN

The Indiana University Health Centers provide outpatient healthcare for the more than 70,000 students on the Bloomington and Indianapolis campuses. Interfaces between eClinicalWorks and internal clinical systems, as well as the University's registrar system, further automate the Health Centers and improve electronic communication among the various clinical services. The Student Portal facilitates communication between the Health Center and students, giving students convenient, secure and private access to the Health Centers.

University of North Carolina at Chapel Hill Chapel Hill, NC

eClinicalWorks has equipped The University of North Carolina at Chapel Hill Campus Health Services with a comprehensive outpatient healthcare system for maintaining and accessing patient medical information for more than 28,000 students. UNC at Chapel Hill implemented the Web-based Student Portal to promote increased communication between the students and Campus Health Services providers. The University also implemented eClinicalWorks Enterprise Business Optimizer (eBO) reporting package, giving Campus Health Services the ability to create customized reports and perform clinical and financial analysis.

Oregon State University (OSU) Corvallis, OR

OSU was an early adopter of technology, purchasing eClinicalWorks in 2006 in order to provide efficient and effective care for its 28,000 students. The interfaces in place between OSU and Orchard Harvest Lab, NovoRad Radiology and Banner Systems provide a consolidated student health record that seamlessly integrates information from multiple sources.

We want to partner with you!

eClinicalWorks is ready to partner with your university health services and athletic department as they prepare to meet the challenges of healthcare reform and cost containment. With rapid deployment strategies, scalable, secure and reliable technology, innovative training models, and the experience to ensure an EMR implementation that is smooth, on-time and within budget, eCW is the healthcare IT partner of choice for colleges and universities across the country.

Call us to learn how we can work with your college, university, and/or athletic departments to deliver high quality healthcare that is student-centric, user-friendly and affordable.
